

Light as Construction Material to Elaborate the Space – The 8 Rules of Artificial Light

▣ SEMINAR DETAILS

- The 8 rules of artificial light vs the ∞ rules of natural light
- Presence and absence
- Light only where needed
- The thickness of light
- Light as a building material
- Tribute to shadow
- Light in motion
- Light generates colour
- The excitement of nothingness

Mario Nanni's seminar entitled '8 regole di luce' establishes useful tools for UK professionals and designers.

Mario Nanni's design principles, on which the Viabizzuno mindset is based, have become a

recognised and admired training tool.

Light to see, light to work, light to think, light to admire. Light: discreet, intriguing, in motion, made to measure for architecture.

Each new project should be approached with modesty, sensitivity, and experience, knowing that lighting technology is a perfect science but also often made of empirical application that requires passion, a desire to take risks and therefore try out new solutions.

In this seminar Mario Nanni identifies eight key rules for good design that go beyond all lighting technology principles:

- Experiencing a space with great intensity and emotion without realising that light is one of the major components of this feeling
- Light creates volume by defining its spaces
- The presence of light and the absence of light fitting
- Light changes intensity and can move with great flexibility
- Light must be designed together with the architecture into which it is built
- Light only where necessary.
- Eulogy of shadow, the strength of light comes when it is about to be switched off.

- On this borderline between light and dark architecture takes shape
- The spectre of light that invades the space colours domestic materials and gently immerses us in the most total colour, synthesis of white light.

▣ DURATION

1 hour.
